SARAH SCHMOLLER

LEAD SOFTWARE ENGINEER

Los Angeles, CA | sarah.schmoller@gmail.com | linkedin.com/in/sarah-schmoller

WORK EXPERIENCE

DOW JONES - Los Angeles, CA / Minneapolis, MN

Lead Software Engineer, AI Content Generation | *Jul 2026 - Present*
Senior Software Engineer, AI Content Generation | *Jul 2023 - Jun 2026*
Software Engineer II, AI Content Generation | *Feb 2023 - Jun 2023*
Software Engineer, AI Content Generation | *Aug 2020 - Jan 2023*

Joined as the first engineer on the newly created AI Content Generation team, taking technical ownership of its core platforms from initial design through large-scale production use. Progressed to technical lead, remaining hands-on in design and implementation while leading a team of developers.

- Architected and built an AI narrative authoring platform integrating LLM-generated content with complex, data-driven branching logic. Built the graph-based templating engine and visual interface, allowing editors to write reusable deterministic, generative, and hybrid narrative workflows without engineering involvement.
- Architected and built a company-wide automated publishing platform using AWS Lambda, Step Functions, and DynamoDB to orchestrate data retrieval, narrative generation, metadata enrichment, and publication. Expanded the platform to produce over 1,000 stories daily for MarketWatch, Barron's, Mansion Global, and Dow Jones Newswires, generating over 90% of content on MarketWatch.com by volume as of 2023.
- Expanded automated publishing across English, Japanese, Chinese, German, French, and Arabic, developing language-specific formatting features.
- Built the backend narrative-generation system for the MarketWatch on Alexa skill, producing spoken summaries from market data in real-time through AWS Lambda and API Gateway.
- Set technical direction, mentored engineers, and partnered with editorial and product stakeholders. Presented the team's work to executives and external audiences.

XANDRA, INC. - Remote

NLG Engineer Intern | May 2020 - Aug 2020

- Built a prototype AI-assisted scriptwriting tool for Conversation Designers using GPT-2 to generate dialogue conforming to specified styles and personalities; explored additional use cases for LLMs in interactive narrative experiences and prepared corpora for language-model training.

EDUCATION

UNIVERSITY OF MINNESOTA
B.A., Computer Science and Linguistics (Double Major) | Cum Laude, 2015 - 2019

LANGUAGES AND TECHNOLOGIES

Python, JavaScript, TypeScript, C#, LLM API Integration, Generative AI,
AI-Assisted Authoring, AI Platform Engineering, NLG, REST APIs, AWS Lambda, Step Functions,
DynamoDB, React
