

SARAH SCHMOLLER

LEAD SOFTWARE ENGINEER

Los Angeles, CA | sarah.schmoller@gmail.com | linkedin.com/in/sarah-schmoller

WORK EXPERIENCE

DOW JONES - Los Angeles, CA / Minneapolis, MN

Lead Software Engineer, AI Content Generation | *Jul 2026 - Present*

Senior Software Engineer, AI Content Generation | *Jul 2023 - June 2026*

Software Engineer II, AI Content Generation | *Feb 2023 - June 2023*

Software Engineer, AI Content Generation | *Aug 2020 - Jan 2023*

Joined as the first engineer on a newly created AI Content Generation team and progressed to technical lead and architect, remaining hands-on in architecture and implementation while leading a team of developers.

- **Architected and built an AI narrative authoring platform** integrating LLM-generated content with complex, data-driven branching logic. Built the graph-based engine and visual authoring interface, enabling editors to create reusable deterministic, generative, and hybrid narrative workflows without engineering involvement.
- **Architected and built a company-wide automated publishing platform** using AWS Step Functions, Lambda, and DynamoDB to orchestrate data retrieval, narrative generation, metadata enrichment, and publication. Systems I designed and managed produced **over 90% of MarketWatch.com content by volume** by 2023 and supported MarketWatch, Barron's, Mansion Global, and The Wall Street Journal.
- Built production narrative workflows at scale, including a publishing system producing **750+ data-driven articles daily** and templates capable of generating hundreds of distinct stories across structured datasets.
- Expanded narrative-generation infrastructure across **English, Japanese, Chinese, German, French, and Arabic**, developing language-specific formatting and generation workflows.
- Built the backend narrative-generation system for the **MarketWatch Alexa skill**, transforming real-time market data into dynamically selected spoken narratives through AWS Lambda and API Gateway.
- Set technical direction, mentored engineers, partnered directly with editorial and product stakeholders, and presented the team's work to executives and external audiences.

XANDRA, INC. - Remote

NLG Engineer Intern | May 2020 - Aug 2020

- Built a prototype AI-assisted scriptwriting tool for Conversation Designers using **GPT-2** to generate dialogue conforming to specified styles and personalities; explored generative AI applications for interactive narrative experiences and prepared corpora for language-model training.

EDUCATION

UNIVERSITY OF MINNESOTA

B.A., Computer Science and Linguistics (Double Major) | Cum Laude, 2015 - 2019

LANGUAGES AND TECHNOLOGIES

Python, JavaScript, TypeScript, C#, LLM API Integration, Generative AI, Narrative Generation, AI-Assisted Authoring, NLG, REST APIs, AWS Lambda, Step Functions, DynamoDB, React
